## UNIT 1 • RELATIONSHIPS BETWEEN QUANTITIES

### Lesson 1: Interpreting Structure in Expressions

#### Practice 1.1.1: Identifying Terms, Factors, and Coefficients

For problems 1 and 2, identify the terms, coefficients, constants, and factors of the given expressions.

1.  $12a^3 + 16a + 4$

2.  $21x^2 + 3x - 15x^2 + 9$

For problems 3 and 4, translate each verbal expression to an algebraic expression. Then, identify the terms, coefficients, and constants of the given expressions.

3. half the sum of  $x$  and  $y$  decreased by one-third  $y$

4. the product of 5 and the cube of  $x$ , increased by the difference of 6 and  $x^3$

5. Write an expression with 4 terms, containing the coefficients 3, 6, and 9.

*continued*

## UNIT 1 • RELATIONSHIPS BETWEEN QUANTITIES

### Lesson 1: Interpreting Structure in Expressions

For problems 6–10, write an algebraic expression to describe each situation. Then, identify the terms, coefficients, constants, and factors.

6. Gavin agrees to buy a 6-month package deal of monthly gym passes, and in turn receives a 15% discount. Write an algebraic expression to represent the total cost of the monthly passes with the discount, if  $x$  represents the cost of each monthly pass.
  
7. Andre purchased 10 cans of tennis balls from an online store and received a 25% discount. Shipping cost \$5.99. Write an algebraic expression to represent the total cost of the tennis balls with the shipping cost, if  $x$  represents the cost of each can.
  
8. Nadia and some friends went to a movie. Their total cost was \$30.24, which included taxes of \$2.24. Write an algebraic expression to represent the price of each movie ticket, not including taxes. Let  $x$  represent the number of Nadia's friends that went to the movies.
  
9. The area of a trapezoid can be found by multiplying the height of the trapezoid by half of the sum of base<sub>1</sub> and base<sub>2</sub>.
  
10. The surface area of a cylinder with radius  $r$  and height  $h$  is twice the product of  $\pi$  and the square of the radius plus twice the product of  $\pi$ , the radius, and the height.
